SECTION 1 - INTRODUCTION

About this Manual

This manual is a comprehensive guide that contains all the information necessary to design, install and maintain the SAPPHIRE® Engineered Extinguishing system. However, the manual does not address information relating to fire detection.

Users of this manual are assumed to be competent fire engineers with a basic knowledge of such systems. The contents are arranged in a logical order describing the various procedures in turn, alternatively specific sections can be referred to as required. Users who are not familiar with the equipment should first read the complete manual.

Definitions

NOVEC™ 1230

NOVEC™ 1230 is a registered trade mark of the 3M™.

System

In this manual ‘system’ refers to the extinguishing equipment and does not include any detection system which may initiate an agent release.

Engineered

Hydraulic flow program used to predict the two phase flow of NOVEC™ 1230 through a pipe network.

Introduction

NOVEC™ 1230 is a clean, safe fire fighting agent for use in total flooding automatic extinguishing systems. It is intended as a long term replacement for Halon 1301 and, whilst maintaining the excellent fire suppression properties of Halon, has none of the environmental problems. Storage and distribution requirements are similar to Halon and the majority of system components are identical. However, NOVEC™ 1230 is not a direct replacement for existing Halon 1301 installations due to the difference in agent quantity and discharge characteristics. The minimum NOVEC™ 1230 design concentration for Class A hazards is 4.2% for UL Listed systems and for FM Approved systems. For Class B hazards it is at least 5.85%.

The US Environmental Protection Agency (EPA) accepts use in normally occupied areas where the concentration doesn't exceed 10%. The safe use criteria has further been confirmed by the Halon Alternative Group (HAG) report. Refer to NFPA 2001, 2008 edition “Clean Agent Fire Extinguishing Systems,” Section 1-5 “Safety,” for additional exposure requirements.

The systems described in this manual are ‘engineered’. Engineered systems for example, may consist of several SAPPHIRE® containers, modularised or manifolded together and connected via a pipe network to a number of discharge nozzles.

Systems may be activated mechanically or electrically. Mechanical manual actuation is via a manual actuator attached to the container valve. Electrical actuation is via a removable side mounted solenoid or a top mounted electrical actuator. Actuation can occur automatically via a signal from a detection and alarm control panel.

Users of this manual should find that sufficient information is provided to plan, design, purchase components, install, operate and maintain the system. However, in the event that part of the document is not understood, or if there is any concern as to the suitability of the protection, do not hesitate to contact one of our specialist engineers for the matter to be quickly resolved.

Approvals and Standards

The SAPPHIRE® manufactured equipment and the NOVEC™ 1230 agent, manufactured by 3M™, have comprehensive approvals and listings providing further support to the overall product.
NOVEC™ 1230 Agent

Approvals include, but are not limited to:

- FM Approved
- Underwriters Laboratories Inc. (UL) Recognised Component
- NFPA 2001 Clean Agent Fire Extinguishing Systems (Listed Alternative)
- US EPA SNAP Rpt. (Unrestricted Listed Alternative)
- Australian Industrial Chemicals Notification (Approved)
- German Institute for Environmental Hygiene and Medicine (Approved)

Manufactured Systems

- Underwriters Laboratories Inc.
- Loss Prevention Certification Board
- Factory Mutual (FM)

SAPPHIRE® systems are manufactured in strict accordance with the internationally recognised Quality assurance Standard, BS EN ISO 9000 and approved to ISO 9001. SAPPHIRE® Extinguishing System units are to be designed, installed, inspected, maintained, tested and recharged by qualified, trained personnel in accordance with The Standard on Clean Agent Fire Extinguishing Systems, NFPA2001, 2008 edition and to be used in accordance with Environmental Protection Agency (EPA) Significant New Alternatives Program (SNAP). Where determined to be appropriate by the authority having jurisdiction, other applicable standards may additionally be utilised to specific system requirements for these purposes.

Health and Safety

A properly designed and installed extinguishing system should not present any significant health or safety problems, however, there are basic precautions to be taken to avoid accidents, and aspects of the system operation that should be understood. End-users often require reassurance regarding the safety of personnel, and this can only be given if a thorough understanding of the properties of the agent and its effects in different situations are known. Best practice should be observed.

NOVEC™ 1230 extinguishes primarily through heat absorption, and does not sufficiently deplete oxygen levels.

Therefore, exposure to NOVEC™ 1230 at the design concentration of 4.2%*, and up to 10.0%, is not hazardous to health. Exposure to higher concentrations is permissible for limited periods. Refer to NFPA 2001, 2008 edition Section 1-5 “Safety,” for exposure requirements. As with halons, the US EPA and the National Fire Protection Association (NFPA) recommend that unnecessary exposure to any agent be avoided and that personnel evacuate protected areas as quickly as possible to avoid the decomposition products of the fire.

NOVEC™ 1230 will decompose at high temperatures to form halogen acids. If so, their presence is readily detected as a sharp, pungent odour long before hazardous maximum exposure levels are reached. Fire toxicity studies conclude that generally decomposition products from the fire itself, especially carbon monoxide, smoke, heat, and oxygen depletion, create a greater hazard.

The noise created by the NOVEC™ 1230 agent discharging can be loud enough to startle people in the vicinity, but is unlikely to cause any permanent injury. Turbulence caused by the high velocity discharge can dislodge substantial objects directly in its path, and cause enough general turbulence within the protected area to move paper and light objects.

Direct contact with the vaporising liquid discharged from an NOVEC™ 1230 nozzle may have a chilling effect on objects and in extreme cases may cause frostbite to the skin. The liquid phase vaporises rapidly when mixed with air and therefore limits the risk to the immediate vicinity of the nozzle. Minor reduction in visibility may occur for a brief period due to the condensation of water vapour.

HMIS: 0-0-1/dodecafluoro-2-methylpentan-3-one/contents under pressure. 0-0-0/nitrogen expellant gas/very cold, contents under pressure. Consult 3M, 3M Center, St. Paul, MN 55144-1000. Emergency phone number 1-800-364-3577.

**WARNING**

The discharge of clean agent systems to extinguish a fire can result in a potential hazard to personnel from the natural form of the clean agent or from the products of combustion that results from exposure of the agent to the fire or hot surfaces. Unnecessary exposure of personnel either to the natural agent or to the products of decomposition shall be avoided.

* UL Design Concentration - See Page 5
First Aid

Refer to the NOVEC™ 1230 Material Safety Data Sheet within Appendix C.

NOVEC™ 1230 Agent Characteristics

NOVEC™ 1230 is a clean agent containing no particles or oily residues. It is produced under ISO 9002 guidelines to strict manufacturing specifications ensuring product purity. NOVEC™ 1230 leaves no residue or oily deposits on delicate electronic equipment, and can be removed from the protected space by ventilation.

NOVEC™ 1230 is thermally and chemically stable, but without the extremely long atmospheric lifetimes associated with some other clean agents. The atmospheric lifetime of NOVEC™ 1230 has been determined to be 5 days (Reference 3M™). The US EPA SNAP does not consider NOVEC™ 1230 to be a long lived substance when discharged, and as such has placed no restrictions on its use. (Environmental Protection Agency’s Significant New Alternatives Program).

Typical areas that may be protected by a SAPPHIRE® system are detailed below; the list is by no means exhaustive:

- Bank Vaults
- Libraries
- Rare Book Stores
- Electronic Data Processing
- Telephone Exchanges
- Studios
- Communication Centres
- Transformer and Switchrooms
- Control Rooms
- Test Laboratories
- Flammable Liquid Stores

The present understanding of the functioning of NOVEC™ 1230 is that its fire fighting effectiveness is achieved through heat absorption. Complete suppression using NOVEC™ 1230 has the following advantages:

- Less visual obscurity and minimal risk to personnel.
- Low toxicity.
- Most effective when used with automatic detection to introduce NOVEC™ 1230 with a 10 second discharge.
- The ability to prevent re-ignition providing concentration levels are maintained.

NOVEC™ 1230 is stored as a liquid in approved DOT or TPED containers and is super-pressurised with dry nitrogen to 25 bar @ 21 °C (360 psi @ 70 °F).

WARNING

NOVEC™ 1230 shall not be used on fires involving the following materials unless they have been tested to the satisfaction of the authority having jurisdiction:

- Certain chemicals or mixtures of chemicals, such as cellulose nitrate and gunpowder, that are capable of rapid oxidation in the absence of air.
- Reactive metals such as lithium, sodium, potassium, magnesium, titanium, zirconium, uranium and plutonium.
- Metal hydrides.
- Chemicals capable of undergoing autothermal decomposition, such as certain organic peroxidase and hydrazine.

System Components

This section describes the individual components that comprise a complete system. Some items are optional depending on the application, and are indicated as such.

SAPPHIRE® Container

The container assembly consists of a container fitted with a valve and internal syphon tube, factory filled with NOVEC™ 1230, and super-pressurised with dry nitrogen to 25 bar @ 21 °C (360 psi @ 70 °F). Containers sharing the same manifold shall be equal in size and fill density. Containers are finished in red and are available in various sizes. A nameplate is fixed to the container displaying the agent weight, tare weight, gross weight, fill density, charge date and fill location.

Figure 1 - SAPPHIRE® Container

Technical Information

The 4.5, 8, 16, 32, 52, 106, 147 and 180 litre containers are manufactured in accordance with DOT 4BW500 or 4BW450, and the 343 litre container in accordance with DOT 4BW450.

Material: Carbon Steel

4BW500
Hydraulic test pressure: 69.0 bar (1000 psi)
Working Pressure: 34.5 bar (500 psi)

4BW450
Hydraulic test pressure: 62.1 bar (900 psi)
Working Pressure: 31.0 bar (450 psi)
Paint Specification: Red epoxy polyester or red polyester powder coated

The 8, 16, 32, 52, 106 and 147 litre containers are also available manufactured in accordance with EN 13322-1.

Material: Carbon Steel

Hydraulic test pressure: 40.0 bar (580 psi)
Working Pressure: 34.5 bar (500 psi)
Paint Specification: Red epoxy polyester or red polyester powder coated

FIRE EXTINGUISHING
SYSTEM UNIT

WARNING
THE DISCHARGE OF CLEAN AGENT SYSTEMS TO EXTIN- GUISH A FIRE CAN RESULT IN A POTENTIAL HAZARD TO PERSONNEL FROM THE NATURAL FORM OF THE CLEAN AGENT OR FROM THE PRODUCTS OF COMBUSTION THAT RESULT FROM EXPOSURE OF THE AGENT TO THE FIRE OR HOT SURFACES. UNNECESSARY EXPOSURE OF PERSONNEL EITHER TO THE NATURAL AGENT OR TO THE PRODUCTS OF DECOMPOSITION SHALL BE AVOIDED. CONTACT MACRON IMMEDIATELY AFTER A DISCHARGE OR FIRE SITUATION.
Valve Assembly

The container valve is the result of extensive research and development and incorporates many unique safety features. The valve assembly is factory-fitted to the container and is supplied pre-assembled with a low pressure switch (to be ordered separately), pressure gauge and burst disc.

- Weight: 2.96 kg (6.526 lbs)
- Equivalent Length: 6.096 m (20 ft)

50 mm (2") Valve
- Body Material: Brass CZ 121
- Outlet Anti-Recoil Cap Material: CZ122
- Max. Working Pressure: 34 bar (493 psi)
- Outlet: 50mm (2"BSPP)
- Low Pressure Switch Port: 1/8" NPT
- Gauge Port: 1/8" NPT
- Pilot Pressure Port: 1/4" BSPP
- Solenoid Adaptor Port: 1/8" NPT
- Overall Size: 173mm (L) x 100mm (Dia)
- (6.12" (L) x 3.94" (Dia))
- Weight: 9.18 kg (20.238 lbs)
- Equivalent Length: 10.668 m (35 ft)

80 mm (3") Valve
- Material: Brass UNS36000
- Max. Working Pressure: 34 bar (493 psi)
- Outlet: 80mm (3" Flared*)
- Low Pressure Switch Port: 1/8" NPT
- Gauge Port: 1/8" NPT
- Pilot Pressure Port: 1/4" NPT
- Solenoid Adaptor Port: None
- Overall Size: 241mm (L) x 129mm (Dia)
- (9.50" (L) x 5.06" (Dia))
- Weight: 18.82 kg (41.491 lbs)
- Equivalent Length: 25.91 m (85 ft)

*Outlet adaptors are available for 3" NPT, BSP and grooved.
Principle of Operation

The SAPPHIRE® valve is a high-flow-rate device specially designed for use in fire systems. Operation is by means of a pressure-differential piston. Container pressure is used within the valve to create a positive force on the piston, sealing the valve closed. Operation of the valve occurs when the upper chamber is vented faster than the ‘make up device’ in the shuttle can replace the pressure. Thereby allowing, the shuttle to be forced up, and free flow of NOVEC™ 1230 from the valve. Upper chamber pressure is released by the electrical, mechanical or pneumatic actuator.

The valve incorporates the following features:

- A pressure operated safety release device (burst disc).
- Main outlet, fitted with anti-recoil cap.
- A connection for a pneumatic, mechanical or electrical actuator, fitted with safety cap.
- A connection for an electrical solenoid.
- A connection for the pneumatic actuation port.

Burst Disc

A burst disc is factory fitted to every valve assembly. It is designed to rupture when the container becomes over pressurised when subjected to temperatures above the designed storage temperature of the container.

Figure 4 - Burst Disc

Low Pressure Switch
(Standard Open On Fall)

A low pressure warning switch is fitted to every container and must be ordered separately. The device continuously monitors the container pressure and in the event of the pressure dropping below 20 bar (290 psi) the switch operates to enable the condition to be signalled to a control unit.

Figure 5 - Low Pressure Switch (Part No. 304.205.006)

Technical Information

| Body: | Hermetically sealed Stainless Steel |
| Switch Type: | Normally Open at Atmospheric Pressure |
| Switch Point: | Open on Fall at 20 bar (290 psi) Close on Rise at 24.1 bar (350 psi) |
| Tolerance: | +/-0.7 bar (± 10 psi) |
| Proof Pressure: | 345 bar (5003 psi) |
| Electrical Housing: | Epoxy Sealed terminals |
| Connection: | Brass 1/8" NPT |
| Max. Current: | Max 2.9 A |
| Voltage Range: | 5-28 v dc |
| Electrical Connection: | 0.9m (3ft) x 2 Core Cable |
| Certification: | UL Recognised |
| IP Rating: | IP65 |
| Wire Leads: | 1.82 m (6 ft) |
| Overall Size: | 38mm (L) x 16mm (Dia) (1.50”(L) x 0.63”(Dia)) |
| Weight: | 0.087 kg (0.192 lbs) |

Low Pressure Switch
(Special Close On Fall)

A low pressure warning switch is fitted to every container and must be ordered separately. The device continuously monitors the container pressure and in the event of the pressure dropping below 20 bar (290 psi) the switch operates to enable the condition to be signalled to a control unit.

Figure 6 - Low Pressure Switch (Part No. 305.209.005)

Technical Information

| Body: | Hermetically sealed Stainless Steel |
| Switch Type: | Normally Closed at Atmospheric Pressure |
| Switch Point: | Close on Fall at 20 bar (290 psi) Open on Rise at 24.1 bar (350 psi) |
| Tolerance: | +/-0.7 bar (± 10 psi) |
| Proof Pressure: | 345 bar (5003 psi) |
| Electrical Housing: | Epoxy Sealed terminals |
| Connection: | Brass 1/8" NPT |
| Max. Current: | Max 2.9 A |
| Voltage Range: | 5-28 v dc |
| Electrical Connection: | 0.9m (3ft) x 2 Core Cable |
| Certification: | UL Recognised |
| IP Rating: | IP65 |
| Wire Leads: | 1.82 m (6 ft) |
| Overall Size: | 38mm (L) x 16mm (Dia) (1.50”(L) x 0.63”(Dia)) |
| Weight: | 0.087 kg (0.192 lbs) |
Low Pressure Switch (Alternate - Transfer On Fall - Option #1)

A low pressure warning switch is fitted to every container and must be ordered separately. The device continuously monitors the container pressure and in the event of the pressure dropping below 20.2 bar (294 psi) the switch operates to enable the condition to be signalled to a control unit.

This low pressure switch is the primary supply, (option #1), of a dual source component used in order to maintain the supply chain and ensure that adequate stock levels are available to fully support customers and installers.

Figure 7 - Alternate Low Pressure Switch (Part No. 305.209.007) Option #1

Technical Information

Body: Zinc Plated Steel and Kapton
Switch Type: Single Pole, Double Throw (SPDT)
Switch Point: Transfers on Fall at 20.2 bar (294 psi) Resets on Rise at 24.1 bar (350 psi)
Tolerance: +/-0.7 bar (± 10 psi)
Proof Pressure: 206.8 bar (3000 psi)
Contact Reset Method: Auto Resetting Contacts
Connection: 1/8” NPT Male
Electrical Rating: 5 A at 28 v dc (Resistive)
Electrical Connection: 3 x 18 awg Flying Leads
Certification: UL Recognised
IP Rating: IP65
Wire Leads: 457.2 m (18”)
Overall Size: 85mm (L) x 28mm (Dia) (3.36"(L) x 1.12"(Dia))
Weight: 0.16 kg (0.35 lbs)

Low Pressure Switch (Alternate - Transfer On Fall - Option #2)

A low pressure warning switch is fitted to every container and must be ordered separately. The device continuously monitors the container pressure and in the event of the pressure dropping below 20 bar (290 psi) the switch operates to enable the condition to be signalled to a control unit.

This low pressure switch is the secondary supply, (option #2), of a dual source component used in order to maintain the supply chain and ensure that adequate stock levels are available to fully support customers and installers.

Figure 8 - Alternate Low Pressure Switch (Part No. 305.209.007) Option #2

Technical Information

Body: Brass and Anodised Aluminium
Switch Type: Single Pole, Double Throw (SPDT)
Switch Point: Transfers on Fall at 20 bar (290 psi) Resets on Rise at 22.8 bar (330 psi)
Tolerance: +/-1.0 bar (± 15 psi)
Proof Pressure: 413.7 bar (6000 psi)
Contact Reset Method: Auto Resetting Contacts
Connection: 1/8” NPT Male
Electrical Rating: 5 A at 24 v dc (Resistive)
Electrical Connection: 3 x 18 awg Flying Leads
Certification: UL Recognised
IP Rating: IP65
Wire Leads: 457.2 m (18”)
Overall Size: 83mm (L) x 32mm (Dia) (3.25”(L) x 1.25”(Dia))
Weight: 0.21 kg (0.46 lbs)
Fixing Brackets

The bracket assembly consists of one back channel and a nut and bolt with two bracket half straps. To securely hold the container in position during the system discharge, two bracket assemblies are required per container. The only exceptions are the 4.5 and 8 litre containers which only require one.

Each strap is notched for insertion into the back channel allowing the container to be properly aligned. The bracket assembly is designed to be mounted to a rigid vertical surface with the container assembly resting fully on the floor.

![Figure 9 - Fixing Bracket (Strap Style)](image)

### Technical Information

- **Material:** Mild Steel
- **Coating:** Black Polyethylene powder-Plascoat LDPE
- **Mounting:** Unistrut Channel
- **Weight:**
  - 0.34 kg (0.75 lbs) (Part No. 311.205.020)
  - 0.30 kg (0.66 lbs) (Part No. 311.205.013)
  - 0.46 kg (1.01 lbs) (Part No. 311.205.014)
  - 0.71 kg (1.56 lbs) (Part No. 311.205.019)

SECTION 2 - SYSTEM COMPONENTS

Manual Actuator

The manual actuator is used to mechanically operate the system at the container position and is fitted to the top of the valve assembly or removable electrical actuator. Inadvertent operation is prevented by a safety clip which has to be removed before activation.

Figure 10 - Manual Actuator (Part No. 304.209.002)

Technical Information

- **Body:** Brass CZ 121
- **Knob:** PVC (Colour: Red)
- **Safety Pin:** Stainless Steel 303
- **Piston Rod:** Brass CZ 121
- **Min. Actuation Force:** 25.5 N (5.73 lbf)
- **Overall Size:** 52mm (L) x 41.5mm (Dia) (2.05” (L) x 1.63” (Dia))
- **Weight:** 0.265 kg (0.584 lbs)

Pneumatic Actuator

The pneumatic actuator is used to pneumatically operate the system at the container position and is fitted to the top of the valve assembly or removable electrical actuator. Pressure from a ‘master’ container is used to actuate the valve, via small bore piping or a flexible hose.

Figure 11 - Pneumatic Actuator (Part No. 304.209.004)

Technical Information

- **Body:** Brass CZ121
- **Actuation Pin:** Stainless Steel
- **Piston Rod:** Brass CZ 121
- **Pipe connection:** 1/4” NPT Female
- **Min. Actuation Pressure:** 4 bar (58 psi)
- **Max. Working Pressure:** 75 bar (58 psi)
- **Overall Size:** 48mm (L) x 41.5mm (Dia) (1.89” (L) x 1.63” (Dia))
- **Weight:** 0.228 kg (0.503 lbs)
Removable Electrical Actuator (Suppression Diode)

The removable electrical actuator locates to the top of the container valve. 24 v dc is required for solenoid operation. Provision is made for the connection of a manual actuator to the top of the actuator assembly. The suppression diode electrical actuator must be wired up correctly with the positive supply from the control panel connected to terminal 1, and the negative supply connected to terminal 2.

The removable electrical actuator has a life span of 10 years from manufacture, which is indicated on the label.

Removable Electrical Actuator (Bridge Rectifier)

The removable electrical actuator locates to the top of the container valve. 24 v dc is required for solenoid operation. Provision is made for the connection of a manual actuator to the top of the actuator assembly. Due to the design of the bridge rectifier it will operate regardless of how it is wired up, the positive supply from control panel can be connected to either terminal 1 or 2 with the reverse for the negative supply.

The removable electrical actuator has a life span of 10 years from manufacture, which is indicated on the label.
**SECTION 2 - SYSTEM COMPONENTS**

### Side Mounted Solenoid Actuator

This solenoid actuator differs from other actuators in that it is side mounted. It is located on the side of the valve via the factory-fitted solenoid adaptor (Part No. 12327), which is supplied with the actuator. The adaptor enables the actuator to be removed safely without actuation of the container valve. It consists of two parts, a male part which is fitted to the container valve, and a female part which is fitted to the side mounted solenoid. The male part can only be factory fitted to the container when it is empty. To remove the solenoid the adapter body should be unscrewed in the anti-clockwise direction. This action will close the schrader valve and then allow the pressure between the schrader and solenoid actuator to be released safely through the threads of the adaptor body. The solenoid adaptor cannot be site-fitted to a filled container, as this would lead to the potentially hazardous discharge of the container.

### Solenoid Adaptor

The adaptor enables the actuator to be removed safely without actuation of the container valve. It consists of two parts, a male part which is fitted to the container valve, and a female part which is fitted to the side mounted solenoid. The male part can only be factory fitted to the container when it is empty. To remove the solenoid the adapter body should be unscrewed in the anti-clockwise direction. This action will close the schrader valve and then allow the pressure between the schrader and solenoid actuator to be released safely through the threads of the adaptor body. The solenoid adaptor cannot be site-fitted to a filled container, as this would lead to the potentially hazardous discharge of the container.

#### Technical Information

**Solenoid Enclosure:** Stainless Steel  
**Voltage:** 24v dc  
**Power Consumption:** 9.5 watts  
**Conduit Thread:** 1/2”NPT  
**Pressure Connection:** 1/8” NPT Female  
**Pressure Range:** 0 - 103 bar (1500 psi)  
**Certification:** UL Recognised  
**Max. Ambient Temp:** 105 °C (221 °F)  
**Solenoid Orientation:** 0-30° Off Vertical  
**Overall Size:** 82mm (L) x 46mm (Dia)  
(3.23” (L) x 1.81” (Dia))  
**Weight:** 0.18 kg (0.40 lbs)

* For UL Listed Systems Only (Not FM Approved), and not available on the 80 mm (3”) Valve and 343 litre container assembly.

25 mm (1") and 50 mm (2") Flexible Discharge Hose

SAPPHIRE® container installations may be connected to the system by means of a flexible discharge hose. This enables containers to be disconnected for maintenance or recharge without dismantling other container mountings, manifold connections and pipework, etc. The flexible discharge hose is provided with a swivel fitting at the inlet.

![Flexible Discharge Hose](image)

25 mm (1") Hose
- Part No. 306.207.002

50 mm (2") Hose
- Part No. 306.207.003

Technical Information

25 mm (1") Hose
- Hose Construction: Twin steel wire braided oil resistant seamless synthetic rubber core to DIN EN 853 1SN
- Connection: Zinc Passivated Mild Steel
  - 25 mm (1" NPT) Straight Fixed Male
  - 25 mm (1" BSPP) 90° Female Swivel Union
- Max. Bend Angle: 15° @ 0 °C (32 °F)
- Max. Working Pressure: 88 bar (1276 psi)
- Overall Size: 405mm (L) x 92mm (W)
  - (15.95" (L) x 3.62" (W))
- Weight: 1.25 kg (2.76 lbs)
- Equivalent Length: 3.14 m (10.3 ft)

50 mm (2") Hose
- Hose Construction: Twin steel wire braided oil resistant seamless synthetic rubber core to DIN EN 853 2SN
- Connection: Zinc Passivated Mild Steel
  - 50 mm (2" NPT) Straight Fixed Male
  - 50 mm (2" BSPP) 90° Female Swivel Union
- Max. Bend Angle: 15° @ 0 °C (32 °F)
- Max. Working Pressure: 80 bar (1160 psi)
- Overall Size: 520mm (L) x 125mm (W)
  - (20.47" (L) x 4.92" (W))
- Weight: 3.90 kg (8.60 lbs)
- Equivalent Length: 5.36 m (17.6 ft)
80 mm (3") Discharge Hose/Check Valve Assembly

The discharge hose/check valve assembly combines the elbow, hose, check valve, and swivel coupling for connection to the valve discharge outlet and the discharge manifold. The check valve provides the facility for a 40 mm (1½") height adjustment.

Figure 17 - 80 mm (3") Discharge Hose / Check Valve Assembly (Part No. 306.205.006)

Technical Information

- **Hose**: Double braid stainless steel
- **Elbow**: Stainless steel UNS 30400
- **Valve Swivel Nut**: Stainless steel UNS 30400
- **Check Valve Swivel Nut**: Cadmium plated mild steel
- **Check Valve Body**: Cadmium plated mild steel
- **Check Valve Seal and Seat**: Brass UNS 36000
- **Spring**: Stainless steel 2.84 kg (6.27 lbs)
- **Max. Working Pressure**: 35 bar (507.5 psi)
- **Overall Size**: 406mm (L) x 76mm (Dia)
  - (Minus Check Valve): 243.7” (L) x 10.00” (W)
- **Weight**: 6.61 lbs
- **Equivalent Length**: 5.1 ft

80 mm (3") Discharge Hose

The discharge hose is used with the 3" NPT single tank adaptor and 90° elbow to connect the container valve outlet to the distribution piping in single tank systems. The hose is constructed of corrugated stainless steel tubing with stainless braid cover.

Figure 18 - 80 mm (3") Discharge Hose (Part No. 306.205.005)

Technical Information

- **Hose Construction**: Double braid stainless steel
- **Max. Working Pressure**: 35 bar (507.5 psi)
- **Min. Bend Radius**: 460mm (18")
- **Overall Size**: 406mm (L) x 76mm (Dia)
  - (Minus Check Valve): 243.7” (L) x 10.00” (W)
- **Weight**: 6.61 lbs
- **Equivalent Length**: 5.1 ft
80 mm (3") Valve Single Tank Adaptors
When a single 343 litre container is being used without a manifold, three swivel adaptors are available for connection to the discharge outlet, either NPT, BSP or grooved.

Manifold Check Valve
Manifold check valves are of mushroom pattern type and lift into the manifold as discharge occurs. The function of the check valve is to prevent loss of extinguishing agent during discharge from an outlet, should a container have been removed. All check valves are ordered separately to the manifold assembly.

Figure 19 - 80mm (3") Valve Single Tank Adaptor
Figure 20 - Manifold Check Valve

Technical Information
Body: Cadmium plated mild steel
3" Flared to 3" BSPT
Overall Size: 115mm (L) x 102mm (W)
2.84 kg (6.27 lbs)
Equivalent Length: 0.55m (1.8 ft)

3" Flared to 3" NPT
Overall Size: 115mm (L) x 102mm (W)
2.84 kg (6.27 lbs)
Equivalent Length: 0.55m (1.8 ft)

3" Flared to 3" Grooved
Overall Size: 72mm (L) x 102mm (W)
1.95 kg (4.30 lbs)
Equivalent Length: 0.55m (1.8 ft)

Technical Information
Body: Brass CZ122
Stem: Stainless Steel
Spring: Stainless Steel
Bottom Plate: Brass CZ122
Top Plate: Stainless Steel
Seal Material: Nitrile
25 mm (1") Check Valve
Inlet Connection Thread: 25 mm (1") NPT Female
Outlet Connection Thread: 40 mm (1½") NPT Male
Overall Size: 54mm (L) x 52.4mm (W)
0.63 kg (1.39 lbs)
Equivalent Length: 0.40m (1.3 ft)

50 mm (2") Check Valve
Inlet Connection Thread: 50 mm (2") NPT Female
Outlet Connection Thread: 65 mm (2½") NPT Male
Overall Size: 73mm (L) x 83mm (W)
1.60 kg (3.53 lbs)
Equivalent Length: 6.66m (21.8 ft)
**Manifold**

Manifolds are fabricated sections of steel pipework. They enable multiple containers to be connected to a common pipe network. They may also be used in systems where main / reserve containers arrangements are required.

Figure 21 - Typical Manifold Assembly

![Manifold Assembly Diagram]

**Technical Information**

- **Material:** ASTM A106 Gr B / BS 3601 Schedule 80
- **Inlet:** NPT socket
- **Outlet:** BSP Taper / NPT Taper / 6" Flange
- **Test Press.:** 90 bar (1305 psi)
- **Finish:** Primed, Ready to paint on site.

**Note:** Assemblies do not include check valves and end caps. For 343 litre manifolds the check valves are part of the hose.

</table>

Note: For ease of assembly flanged manifolds are available for 150 mm diameter. 150mm flanged manifolds with either 3 or 4 ports are supplied as a one piece assembly. Whilst manifolds with 5 to 10 ports are made up from smaller sections due to the size and weight as listed below:
- 5 port manifold - 3 port end and 2 port mid section
- 6 port manifold - 3 port end and 3 port mid section
- 7 port manifold - 3 port end and 2 port mid section
- 8 port manifold - 4 port end and 3 port mid section
- 9 port manifold - 3 port end and two 3 port mid sections
- 10 port manifold - 4 port end and two 3 port mid sections
All 150mm flanged manifolds include an end cap.
SECTION 2 - SYSTEM COMPONENTS

Manifold Inlets (Sockets)

Manifold inlets are available for the construction of system manifolds.

Construction of Manifolds

For customers wishing to manufacture their own manifolds they must be constructed as detailed below, and use the manifold inlets specified on Page 25, (Figure 22 and Table 7).

Figure 23 - Manifold construction

- PIPING MUST BE SCHEDULE 80
- TEST PRESSURE - 90 BAR (1300 psi)
- ALL DIMENSIONS MUST BE WITHIN ± 1/8”
- AFTER WELDING, MAKE CERTAIN ALL INLET HOLES IN THE PIPE ARE CLEAN OF ANY WELD SPATTER AND OPEN COMPLETELY

Manifold Bracket Assembly
A manifold bracket assembly consists of two lengths of unistrut, mounted vertically on a wall or bulk head to enable height adjustment of the manifold assembly. Cantilever brackets are fastened to the unistrut and each are held in position using a uninut long spring, washer and hex head screw. Manifold brackets slot into the cantilever and are clamped using a hex head screw and plain nut. Each manifold bracket assembly is supplied in pairs.

Flexible Pilot Hose
The flexible pilot hose is used to connect pressure activated devices to the system, e.g. the pilot cylinder to the slave container to the pressure switch.

Technical Information

| Outer sheath:                      | Stainless Steel Braided |
| Inner sheath:                      | PTFE to BS 4976         |
| Max. Working Pressure:             | 190 bar (2755 psi)      |
| Max. Bend Radius:                  | 60 mm (2.4")@ 0 °C (32 °F) |
| Connections:                       | Zinc Passivated Mild Steel |
| Overall Size:                      | 710mm (L) x 7mm (Dia) (27.95”(L) x 0.28”(Dia)) |
| Weight:                            | 0.15 kg (0.33 lbs)      |
Male Adaptors
This adaptor (309.013.005) connects the pilot hose to the 25 mm (1") and 50 mm (2") container valve assembly. The male adapter (309.013.006) connects to the 80 mm (3") container valve assembly and also to the pressure switch.

![Male Adaptor](image)

**Technical Information**
- Material: Steel 230 M07 Pb
- Connection: 1/4”BSPP x 1/4”BSPT (Part No. 309.013.005)
- Connection: 1/4”BSPP x 1/4”NPT (Part No. 309.013.006)
- Max. Working Pressure: 350 bar (5076 psi)
- Overall Size: 34mm (L) x 19mm (W) (1.35” (L) x 0.75” (W))
- Weight: 0.034 kg (0.08 lbs)

Male Pilot Hose Connector
The male pilot hose connector is used to connect two pilot hoses together for systems where a second container of a different size is used to protect a different enclosure. For example: a large container is protecting a room and a separate smaller container protects the subfloor, and both containers are to actuate simultaneously, and a hose longer than Part No. 306.205.003 is required.

![Male Pilot Hose Connector](image)

**Technical Information**
- Material: Steel 230 M07 Pb
- Connection: 1/4”BSPP x 1/4”BSPP
- Max. Working Pressure: 350 bar (5076 psi)
- Overall Size: 30mm (L) x 19mm (W) (1.18” (L) x 0.75” (W))
- Weight: 0.034 kg (0.08 lbs)
Street Elbow
This elbow can be used to connect a pilot hose to an 80 mm (3") valve. The street elbow’s 1/4" NPT male thread screws into the valve body actuation port. The 1/4" NPT thread of the male adaptor (Part No. 309.013.006) screws into the street elbow. The flexible pilot hose (Part No. 306.205.003) would then screw onto the male adaptor.

Figure 28 - Street Elbow (Part No. 309.013.008)

Male Tee
This is used primarily in manifold systems for connecting pilot lines from one slave container to the next.

Figure 29 - Male Tee (Part No. 309.200.021)

SECTION 2 - SYSTEM COMPONENTS

Male Elbow

This elbow can be used on the last slave container when the pressure switch connection is taken from the manifold or piping networks.

Figure 30 - Male Elbow (Part No. 309.013.009)

Pressure Switch

The pressure switch is activated by pressure from the agent during discharge and can be used to signal to a control panel that the system has actually discharged. The pressure switch latches on operation and has a reset button. The pressure switch is supplied with a 1/4" BSPP x 1/4" NPT male adaptor (Part No. 309.013.006).

Figure 31 - Pressure Switch (Part No. 304.205.007)

Technical Information

Material: Brass
Connection: 1/4" BSPP x 1/4" NPT
Max. Working Pressure: 450 bar (6527 psi)
Overall Size: 28mm (L) x 25mm (W)
(1.10" (L) x 1.00 (W))
Weight: 0.050 kg (0.11 lbs)

Technical Information

Housing: Die-cast Aluminium
Pressure Connection: Nickel Plated Brass
Switch Point: 4 bar Rising (58 psi)
Tolerance: ± 0.34 bar (± 5 psi)
IP Rating: IP65
Connection: 1/4" NPT Female
Conduit Thread: 1/2" NPT Female
Max. Working Pressure: 103.4 bar (1500 psi)
DC Switch Rating: 1A 24v dc
Installation Environment: non-corrosive / indoor
Overall Size: 165mm (L) x 101mm (W)
(6.50" (L) x 3.98 (W))
Weight: 1.22 kg (2.69 lbs)
Discharge Nozzle

NOVEC™ 1230 is distributed within the protected area by the discharge nozzle which is sized to ensure the correct flow of agent for the risk. Nozzles are available with seven or eight ports to allow for 180° or 360° horizontal discharge patterns. Ports are drilled in 0.1 mm (0.004 in) increments to the specified system design. Nozzles are supplied as standard in Brass as BSPP or NPT with Stainless Steel as an option.

Door Notice
A door notice is required at each entrance to the risk to advise personnel that they are entering a protected area.

Figure 33 - Door Notice (Part No. 314.207.002)

Manual Release Notice
A notice should be located at each manual release position.

Figure 34 - Manual Release Sign (Part No. 314.207.003)

Technical Information
Material: 2 mm (0.08") Craylon
Finish: Gloss, scratch resistant
Overall Size: 210mm (L) x 210mm (W) (8.27" (L) x 8.27" (W))
Weight: 0.025 kg (0.055 lbs)

For areas protected by concentrations greater than NOAEL (unoccupied spaces only).

Technical Information
For areas protected by concentrations less than NOAEL (Part No. 314.207.001).

Technical Information
Material: 2 mm (0.08") Craylon
Finish: Gloss, scratch resistant
Overall Size: 212mm (L) x 75mm (W) (8.35" (L) x 2.95" (W))
Weight: 0.011 kg (0.024 lbs)
Liquid Level Measuring Device

The measuring device is used to measure the level of liquid NOVEC™ 1230 in 106, 147, 180, and 343 litre containers. The weight of the NOVEC™ 1230 in the container is determined by converting the level measurement into a weight measurement using the weight conversion tables in appendix D of this manual. The operating temperature range for the liquid level measuring device is -18 to 55 °C (0 to 130 °F).

The liquid level is found by lifting the measuring tape from inside the tube to the end (or approximately 75 mm (3") above the anticipated liquid level) and slowly lowering the tape until a magnetic interlock with the float is felt. The tape will then remain in the up position, allowing a reading at the top of the housing. This measurement is accomplished without removing the tank from the fire suppression system.

The device must be installed in an empty container assembly before filling, the liquid level measuring device must be ordered as a separate line item.

**Technical Information**

- **Mounting Thread:** 1.3125-12UN-2A
- **Stem Material:** Brass
- **Mounting Material:** Brass
- **Float Material:** ECCO
- **Model:** Diptape Indicator
- **Approximate Length:** 814 mm (32") (Part No. 300.015.127) 1093 mm (43") (Part No. 300.015.128)
- **Weight:** 1.13 kg (2.49 lbs) (Part No. 300.015.127) 1.52 kg (3.36 lbs) (Part No. 300.015.128)
